

```
import hashlib

for arg in sys.argv[1:]:
    mdf = hashlib.md5()

    # read() reads full contents when no arguments.
    # "b" is for Windows.
    f = open(path, "rb")
    mdf.update(f.read())
    f.close()
    print(mdf.hexdigest().upper())
```
